

September 30, 2026

- Go over SRS document: Due Oct 9
 - 10-15 pages
 - Part 1 (1-2 pages)
 - Team member roles
 - Acronyms/language used in the project
 - List contributions of team member
 - Executive Summary & Purpose
 - What is the problem? What is our proposed solution?
 - Media literacy
 - Part 2 (8-10 pages)
 - Define stakeholders and users
 - Constraints
 - Mandates, architecture we need to be mindful of for the project
 - IP considerations
 - We would need the user to have a Chrome Browser
 - Manaav and Aditya can identify constraints for software implementation
 - Functional Requirements
 - Expected input, output, etc.
 - Could use F1-Score metrics here
 - P0 (Must have)
 - Model must work to some extent
 - P1 (High priority)
 - P2 (Medium priority)
 - P3 (Low priority)
 - Research paper implementation
 - Additional features to add complexity
 - Data Strategy and Quantitative Metrics
 - Define datasets used for training (!)
 - Validation metric (F1-score in our case)
 - Non-functional requirements
 - HCI
 - Usability
 - Accessibility
 - Speed and scalability
 - Maintainability
 - Software implementation/software design
 - Risk management & feasibility analysis
 - Risk matrix
 - Administrative or technical obstacles
 - Part 3: Project Development & Execution Plan (4-5 pages)
 - Team communication

- Engineering workflow and version control
 - Repo structure
- Infrastructure & Compute resources
 - Technical infrastructure that we can use to help develop our project
 - CAS GPUs, or we could get our own
- Technology stack
 - Testing, framework
- Proof of Concept Demonstration Plan
 - Working code, validate technical risks
- Project Schedule and Gantt Chart
