

Capstone Meeting Questions

Monday, September 28, 2026

Christina: Yellow

Shelby: Green

Lia: Blue

Scarlett: Pink

Manav: Red

Aditya: Orange

- Does enough data/annotated data exist for the components of Toulmin's model (Claims, Grounds, Warrant, Backing, Qualifier, Rebuttal)? Would it be better to focus on a simplified version (i.e. the three core parts of an Argument: Claims, Grounds, Warrant), Or a modified version of Toulmin's argumentation model with something using components like Claim, Premise, Backing, Rebuttal, and Refutation(Annotation scheme from *Argumentation Mining in User-Generated Web Discourse*)
 - Literature Review:
 - Places to search

 - <https://www.icwsm.org/2027/index.html>
 - Proceedings from 2025:
<https://ojs.aaai.org/index.php/ICWSM/issue/view/658>
 - Google scholar
 - Semantic scholar
 - Search for:
 - Toulmin
 - Argumentation dataset
 - Fact checking and misinformation literature
 - Good for identifying claims, some works might have methods that will be useful for info retrieval - knowledge graphs
 - Claim or argument identification
 - Look for a survey or meta analysis
 - Argumentation mining/relation extraction
 - Kialo
 - Claim verification
 - Change my view
 - Subreddits for fact checking articles
 - <https://aclanthology.org/2023.acl-long.665/>
 - *Domain adaptation
 - Some examples
 - <https://aclanthology.org/2024.argmining-1.4.pdf>

- After researching, we saw there exists annotated data for Toulmin's argument structure but it tends to be intentional (for example, student essays where argument structure is enforced). It seems annotated data for more political news articles and media tends to have a more simplified argument structure.
 - Should we train and test our model with different domains of data (for example, student essays and news articles), or should we continue to try to find strictly political news data?
- There seem to be more open-source argument mining datasets for general online discourse and political debates instead of strictly political news articles.
 - Are political articles a feasible scope for this idea? Would it be better to work on a different domain? i.e general opinion pieces in media?

Methods

- Named entity recognition and relation extraction
- Discourse parsing, semantic and syntactic parsing
- To read: <https://web.stanford.edu/~jurafsky/slp3/21.pdf>
- Domain adaptation -
